June 2012

IMPORTANT PUBLIC HEALTH ALERT

Dear Principal

The Health Service Executive wishes to advise you of the possibility of measles infection in students or young staff attending or assisting in any courses held in your school over the summer months.

This follows earlier correspondence sent to the organisers of language colleges in February 2012 and June 2012 (as enclosed). Since then there has been an outbreak of measles in West Cork affecting mostly second level students. To date over fifty cases have been reported and three children have been hospitalised. The outbreak is occurring in children who have not previously been vaccinated and as measles is highly infectious there are concerns that it may spread throughout the summer.

Please alert course organisers in your school to this information. Further details are available at www.immunisation.ie

Yours sincerely

IMPORTANT PUBLIC HEALTH ALERT

Dear Principal or Course Organiser,

The Health Service Executive wishes to advise language colleges to be aware of the possibility of measles infection among their students or young staff attending or assisting in courses in 2012.

**In 2011 over 30,000 measles cases and eight deaths were reported in 29 European countries.** Many cases of measles resulted from infected people travelling between countries.

Measles is highly infectious and any non-vaccinated individuals are at particular risk of measles and are then likely to transmit the infection to non-immune students or staff.

**Vaccination with MMR (measles, mumps and rubella) vaccine is the only way to protect against measles.** In Ireland the first MMR dose is given at 12 months of age, and the second dose at 4-5 years of age (either by school vaccination teams or by GP).

For their own protection, I recommend that young people and staff from any country or Ireland attending your college ensure they have received TWO doses of MMR vaccine prior to attendance. Students and young staff should be asked to provide documentation of MMR vaccination status (or of measles immunity) from their own doctor or immunisation service.

Vaccination of all students and staff should ensure that no measles outbreaks occur in your college. In the unlikely event that a measles case is identified despite the above measures unvaccinated individuals may be requested by public health to absent themselves from the course in order to protect themselves and others from measles.

**Please alert students, parents and staff to this information in advance of attendance at your language course.** Further details are available at www.immunisation.ie

Yours sincerely

June 2012

IMPORTANT PUBLIC HEALTH ALERT

Dear Principal or Course Organiser,

Following my previous letter to you in March 2012 I wish to remind Irish language colleges to be aware of the possibility of measles infection among their students or young staff attending or assisting in summer courses in 2012.

In 2011 over 30,000 measles cases and eight deaths were reported in 29 European countries. Since April 2012 over 50 cases of measles have been reported in second level school students West Cork and three children have been hospitalised.

Measles is highly infectious and any non-vaccinated individuals are at particular risk of measles and are then likely to transmit the infection to non-immune students or staff.

Vaccination with MMR (measles, mumps and rubella) vaccine is the only way to protect against measles. In Ireland the first MMR dose is given at 12 months of age, and the second dose at 4-5 years of age (either by school vaccination teams or by GP).

For their own protection, I recommend that young people and staff attending your college ensure they have received TWO doses of MMR vaccine prior to attendance. Students and young staff should be asked to provide documentation of MMR vaccination status (or of measles immunity) from their own doctor or immunisation service.

Vaccination of all students and staff should ensure that no measles outbreaks occur in your college. In the unlikely event that a measles case is identified despite the above measures unvaccinated individuals may be requested by public health to absent themselves from the course in order to protect themselves and others from measles.

Please alert students, parents and staff to this information in advance of attendance at your language course. Further details are available at www.immunisation.ie
